

The past 11 weeks Tariq has been working at Femto Engineering on his internship. I've experienced Tariq as a nice colleague to work with, as a person as well as a technical professional. Although Tariq is still at the beginning of his technical career he certainly has solid basic technical skills already.

The research project we provided demanded to keep a global overview of the project while having a focus on details at the same time as well. Because of the limited amount of time available the focus needs to be very strong. In this area there is some room for improvement for Tariq. As seen with most starting engineers, it's sometime difficult to keep close to the research question without wandering off.

The technical content of the work Tariq produced is up to par. He showed a lot of initiative to get all the information required for the study. And the results of the study can be used to improve future FE work of our other colleagues.

Overall the level of reporting by Tariq is ok. However, there certainly is room for improvement. The information presented needs to be clear for all readers. Readers close to the project are well known with the research goal, intermediate steps and the technical details. For other readers it can be difficult to understand when this information is not complete.

All in all we're very satisfied with the work done by Tariq. His work is a good basis for further study on this topic.

#### Scores (out of 10)

Independent work effort:	8
Initiative:	7
Communication:	8
Technical content:	7
Reporting:	7
Overall:	7
