

MINISTERIO  
DE ECONOMÍA  
Y COMPETITIVIDAD

To whoever interested:

This letter is to state that Samadrita Karkamar has successfully undertaken his training at our premises in the context of his Master with professor S. Zlotnik.

As he describes in his report, the main tasks have been:

- Understanding the software controlling an Augmented Reality sandbox device.
- Modifying the GLSL code of the Sandbox to allow visualizing the erosional response of the water flow.
- Familiarizing with the common fluvial erosion laws.
- Direct email contact with the original programmer.
- Writing a report of the editions performed and the use of the resulting code.

The student has had access to our facilities and has been in contact with our science outreach manager to explain his progress.

In summary, his training with us has been a valuable experience for both sides.
